Figure 6.7.1.3. Median number (panels on the left) and median proportion (panels on the right) of smolts killed during emigration due to direct and indirect cumulative mortality associated with dam passage across the 15 modeled hydroelectric dams in generations 1–10. Medians (circles) and twenty-fifth to the seventy-fifth percentiles (lines) are shown for 0.25, 0.5, 1 (base), 2, and 4 times the base marine survival rate (top to bottom, respectively) under the Base Case scenario.
