

Figure 6.16.1.2. Proportion of iterations when at least one two sea-winter female was present in three areas of the Penobscot River watershed: the Upper Penobscot (i.e., above West Enfield Dam), the Piscataquis (i.e., the Piscataquis River watershed), and the Lower Penobscot (i.e., below the West Enfield Dam). Values are shown for generations 1–10 for all adults that unsuccessfully attempt to pass an individual dam spawning in the production unit (PU) immediately below the impassable dam, for adults being evenly distributed in all PUs below the impassable dam, and the base (top to bottom, respectively) under the Base Case scenario.
