

Figure 6.20.1.2. Proportion of iterations when at least one two sea-winter female was present in three areas of the Penobscot River watershed: the Upper Penobscot (i.e., above West Enfield Dam), the Piscataquis (i.e., the Piscataquis River watershed), and the Lower Penobscot (i.e., below the West Enfield Dam). Values are shown for generations 1–10 for downstream path choice rates for the Stillwater Branch of 0.25, 0.5, 1 (base), 2, and 4 times the base (with Stillwater Branch use capped at one) (top to bottom, respectively) under the Base Case scenario.
